# Command and Scripting Interpreter: PowerShell

#### Other sub-techniques of Command and Scripting Interpreter (11)

Adversaries may abuse PowerShell commands and scripts for execution. PowerShell is a powerful interactive command-line interface and scripting environment included in the Windows operating system. [1] Adversaries can use PowerShell to perform a number of actions, including discovery of information and execution of code. Examples include the start-Process cmdlet which can be used to run an executable and the Invoke-Command cmdlet which runs a command locally or on a remote computer (though administrator permissions are required to use PowerShell to connect to remote systems).

PowerShell may also be used to download and run executables from the Internet, which can be executed from disk or in memory without touching disk.

A number of PowerShell-based offensive testing tools are available, including Empire, PowerSploit, PoshC2, and PSAttack. [2]

PowerShell commands/scripts can also be executed without directly invoking the powershell.exe binary through interfaces to PowerShell's underlying system.Management.Automation assembly DLL exposed through the .NET framework and Windows Common Language Interface (CLI).[3][4][5]

	ID	Name	Description
	<u>S0360</u>	BONDUPDATER	BONDUPDATER is written in PowerShell. [43][44]
	<u>G0060</u>	BRONZE BUTLER	BRONZE BUTLER has used PowerShell for execution. [45]
	S1039 Bumblebee		<u>Bumblebee</u> can use PowerShell for execution. <sup>[46]</sup>
	<u>C0018</u>	<u>C0018</u>	During C0018, the threat actors used encoded PowerShell scripts for execution. [47][48]
	<u>C0021</u>	<u>C0021</u>	During $\underline{\text{C0021}}$ , the threat actors used obfuscated PowerShell to extract an encoded payload from within an .LNK file. [49][50]
	<u>C0032</u>	<u>C0032</u>	During the <u>C0032</u> campaign, <u>TEMP.Veles</u> used PowerShell to perform timestomping. <sup>[51]</sup>
	<u>S0674</u>	<u>CharmPower</u>	<u>CharmPower</u> can use PowerShell for payload execution and C2 communication. [52]
	<u>G0114</u>	<u>Chimera</u>	<u>Chimera</u> has used PowerShell scripts to execute malicious payloads and the DSInternals PowerShell module to make use of Active Directory features. [53][54]
	<u>S1149</u>	CHIMNEYSWEEP	<pre>CHIMNEYSWEEP can invoke the PowerShell command [Reflection.Assembly]::LoadFile(\"%s\")\n\$i=\"\"\n\$r=[%s]::%s(\"%s\",[ref] \$i)\necho \$r,\$i\n to execute secondary payloads.</pre>
	<u>G1021</u>	<u>Cinnamon Tempest</u>	<u>Cinnamon Tempest</u> has used PowerShell to communicate with C2, download files, and execute reconnaissance commands. <sup>[56]</sup>
	<u>S0660</u>	Clambling	The <u>Clambling</u> dropper can use PowerShell to download the malware. [57]
	<u>G0080</u>	Cobalt Group	Cobalt Group has used powershell.exe to download and execute scripts. [58][59][60][61][62][63]
	<u>S0154</u>	<u>Cobalt Strike</u>	<u>Cobalt Strike</u> can execute a payload on a remote host with PowerShell. This technique does not write any data to disk. <u>[64][65]</u> <u>Cobalt Strike</u> can also use <u>PowerSploit</u> and other scripting frameworks to perform execution. <u>[66][67][68][69]</u>
	<u>S0126</u>	ComRAT	<u>ComRAT</u> has used PowerShell to load itself every time a user logs in to the system. <u>ComRAT</u> can execute PowerShell scripts loaded into memory or from the file system. [70][71]
	<u>G0142</u>	Confucius	Confucius has used PowerShell to execute malicious files and payloads.[72]
	<u>S0591</u>	<u>ConnectWise</u>	ConnectWise can be used to execute PowerShell commands on target machines. [73]
	<u>G0052</u>	<u>CopyKittens</u>	<u>CopyKittens</u> has used PowerShell Empire. <sup>[74]</sup>
	<u>S1155</u>	Covenant	Covenant can create PowerShell-based launchers for Grunt installation. [75]
	<u>S0488</u>	<u>CrackMapExec</u>	<u>CrackMapExec</u> can execute PowerShell commands via WMI.[76]
	<u>\$1023</u>	<u>CreepyDrive</u>	$\underline{\text{CreepyDrive}} \text{ can use Powershell for execution, including the cmdlets } \text{Invoke-WebRequest and } \text{Invoke-Expression}. \\ \underline{^{[77]}}$
	<u>\$1024</u>	<u>CreepySnail</u>	<u>CreepySnail</u> can use PowerShell for execution, including the cmdlets Invoke-WebRequst and Invoke-Expression. [77]
	<u>S0625</u>	<u>Cuba</u>	<u>Cuba</u> has been dropped onto systems and used for lateral movement via obfuscated PowerShell scripts. <sup>[78]</sup>
	<u>G1012</u>	<u>CURIUM</u>	<u>CURIUM</u> has leveraged PowerShell scripts for initial process execution and data gathering in victim environments. <sup>[79]</sup>
	<u>G1034</u>	<u>Daggerfly</u>	<u>Daggerfly</u> used PowerShell to download and execute remote-hosted files on victim systems. <sup>[80]</sup>

ID	Name	Description
G0079	<u>DarkHydrus</u>	<u>DarkHydrus</u> leveraged PowerShell to download and execute additional scripts for execution. [81]
<u>G0105</u>	<u>DarkVishnya</u>	<u>DarkVishnya</u> used PowerShell to create shellcode loaders. <sup>[83]</sup>
<u>S0673</u>	<u>DarkWatchman</u>	<u>DarkWatchman</u> can execute PowerShell commands and has used PowerShell to execute a keylogger. [84]
<u>G0009</u>	<u>Deep Panda</u>	<u>Deep Panda</u> has used PowerShell scripts to download and execute programs in memory, without writing to disk. <sup>[85]</sup>
<u>S0354</u>	<u>Denis</u>	<u>Denis</u> has a version written in PowerShell. <sup>[22]</sup>
<u>S0695</u>	Donut	<u>Donut</u> can generate shellcode outputs that execute via PowerShell. <sup>[86]</sup>
<u>S0186</u>	<u>DownPaper</u>	<u>DownPaper</u> uses PowerShell for execution. <sup>[87]</sup>
<u>G0035</u>	<u>Dragonfly</u>	<u>Dragonfly</u> has used PowerShell scripts for execution. [88][89]
<u>G1006</u>	Earth Lusca	Earth Lusca has used PowerShell to execute commands. [90]
<u>S0554</u>	<u>Egregor</u>	Egregor has used an encoded PowerShell command by a service created by <u>Cobalt Strike</u> for lateral movement. [91]
<u>G1003</u>	Ember Bear	Ember Bear has used PowerShell commands to gather information from compromised systems, such as email servers. [92]
<u>S0367</u>	<u>Emotet</u>	Emotet has used Powershell to retrieve the malicious payload and download additional resources like Mimikatz. [93][94][95][96][97]
<u>S0363</u>	<u>Empire</u>	Empire leverages PowerShell for the majority of its client-side agent tasks. Empire also contains the ability to conduct PowerShell remoting with the Invoke-PSRemoting module. [98]
<u>S0512</u>	<u>FatDuke</u>	<u>FatDuke</u> has the ability to execute PowerShell scripts. <sup>[100]</sup>
<u>S0679</u>	<u>Ferocious</u>	<u>Ferocious</u> can use PowerShell scripts for execution. <sup>[101]</sup>
<u>G0051</u>	FIN10	FIN10 uses PowerShell for execution as well as PowerShell Empire to establish persistence. [102][98]
<u>G1016</u>	FIN13	FIN13 has used PowerShell commands to obtain DNS data from a compromised network. [103]
G0037	FIN6	FIN6 has used PowerShell to gain access to merchant's networks, and a Metasploit PowerShell module to download and execute shellcode and to set up a local listener. [104][105][106]
<u>G0046</u>	FIN7	FIN7 used a PowerShell script to launch shellcode that retrieved an additional payload. [107][108] [109][110]
<u>G0061</u>	FIN8	FIN8's malicious spearphishing payloads are executed as <u>PowerShell</u> . FIN8 has also used <u>PowerShell</u> for lateral movement and credential access. [111][112][113][114]
<u>S0381</u>	<u>FlawedAmmyy</u>	FlawedAmmyy has used PowerShell to execute commands.[115]
<u>G0117</u>	Fox Kitten	Fox Kitten has used PowerShell scripts to access credential data.[116]
<u>C0001</u>	<u>Frankenstein</u>	During <u>Frankenstein</u> , the threat actors used PowerShell to run a series of Base64-encoded commands that acted as a stager and enumerated hosts. [117]

	ID	Name	Description
ŀ			· ·
	<u>G0093</u>	<u>GALLIUM</u>	GALLIUM used PowerShell for execution to assist in lateral movement as well as for dumping credentials stored on compromised machines. [118]
	<u>G0084</u>	Gallmaker	<u>Gallmaker</u> used PowerShell to download additional payloads and for execution. [119]
	<u>G0047</u>	<u>Gamaredon Group</u>	<u>Gamaredon Group</u> has used obfuscated PowerShell scripts for staging. [120]
	<u>S1117</u>	GLASSTOKEN	GLASSTOKEN can use PowerShell for command execution.[121]
	<u>G0115</u>	GOLD SOUTHFIELD	GOLD SOUTHFIELD has staged and executed PowerShell scripts on compromised hosts. [122]
	<u>S1138</u>	Gootloader	<u>Gootloader</u> can use an encoded PowerShell stager to write to the Registry for persistence. [123] [124]
	<u>G0078</u>	<u>Gorgon Group</u>	<u>Gorgon Group</u> malware can use PowerShell commands to download and execute a payload and open a decoy document on the victim's machine. [125]
	<u>S0417</u>	GRIFFON	GRIFFON has used PowerShell to execute the Meterpreter downloader TinyMet. [126]
	<u>G0125</u>	<u>HAFNIUM</u>	HAFNIUM has used the Exchange Power Shell module Set-OabVirtualDirectoryPowerShell to export mailbox data. [127][128]
	<u>S0151</u>	HALFBAKED	HALFBAKED can execute PowerShell scripts.[107]
	<u>S0037</u>	<u>HAMMERTOSS</u>	HAMMERTOSS is known to use PowerShell. <sup>[129]</sup>
	<u>S0499</u>	<u>Hancitor</u>	Hancitor has used PowerShell to execute commands. <sup>[130]</sup>
	<u>S0170</u>	<u>Helminth</u>	One version of <u>Helminth</u> uses a PowerShell script. <sup>[131]</sup>
	C0038 HomeLand Justice Dur		<u>HEXANE</u> has used PowerShell-based tools and scripts for discovery and collection on compromised hosts. [132][133][134]
			During <u>HomeLand Justice</u> , threat actors used PowerShell cmdlets New-MailboxSearch and Get-Recipient for discovery. [135][136]
	G0100 Inception		Inception has used PowerShell to execute malicious commands and payloads. [137][138]
	G0119 Indrik Spider		Indrik Spider has used PowerShell Empire for execution of malware. [139][140]
	<u>S1132</u>	<u>IPsec Helper</u>	<u>IPsec Helper</u> can run arbitrary PowerShell commands passed to it. <sup>[141]</sup>
	<u>S0389</u>	<u>JCry</u>	JCry has used PowerShell to execute payloads.[142]
	<u>S0648</u>	JSS Loader	JSS Loader has the ability to download and execute PowerShell scripts.[143]
	<u>S0387</u>	<u>KeyBoy</u>	KeyBoy uses PowerShell commands to download and execute payloads.[144]
	<u>S0526</u>	KGH_SPY	KGH_SPY can execute PowerShell commands on the victim's machine. [145]
	G0094	<u>Kimsuky</u>	<u>Kimsuky</u> has executed a variety of PowerShell scripts including Invoke-Mimikatz. [146][147][148] [149][150]
	<u>S0250</u>	Koadic	Koadic has used PowerShell to establish persistence. <sup>[151]</sup>
	<u>S0669</u>	<u>KOCTOPUS</u>	KOCTOPUS has used PowerShell commands to download additional files. [151]
	<u>S0356</u>	KONNI	KONNI used PowerShell to download and execute a specific 64-bit version of the malware. [152]

ID	Name	Description
<u>G003</u>	32 <u>Lazarus Group</u>	<u>Lazarus Group</u> has used PowerShell to execute commands and malicious code. [154]
G014	10 <u>LazyScripter</u>	<u>LazyScripter</u> has used PowerShell scripts to execute malicious code. [151]
G006	<u>Leviathan</u>	<u>Leviathan</u> has used PowerShell for execution. [155][156][157][158]
<u>S068</u>	<u>LitePower</u>	<u>LitePower</u> can use a PowerShell script to execute commands. <sup>[101]</sup>
<u>S068</u>	Lizar	<u>Lizar</u> has used PowerShell scripts. <sup>[159]</sup>
<u>S04</u> 4	Lokibot	<u>Lokibot</u> has used PowerShell commands embedded inside batch scripts. [160]
<u>S114</u>	<u>LunarWeb</u>	<u>LunarWeb</u> has the ability to run shell commands via PowerShell. <sup>[161]</sup>
<u>S106</u>	Mafalda	Mafalda can execute PowerShell commands on a compromised machine. [162]
G005	Magic Hound	Magic Hound has used PowerShell for execution and privilege escalation. [163][164][165][166][167]
<u>G00</u> 4	15 menuPass	menuPass uses PowerSploit to inject shellcode into PowerShell.[168][169]
<u>S068</u>	Meteor Meteor	Meteor can use PowerShell commands to disable the network adapters on a victim machines. [170]
<u>S055</u>	MoleNet	MoleNet can use PowerShell to set persistence.[171]
G002	Molerats Molerats	Molerats used PowerShell implants on target machines.[172]
<u>S025</u>	Mosquito	Mosquito can launch PowerShell Scripts.[173]
G101	9 MoustachedBouncer	MoustachedBouncer has used plugins to execute PowerShell scripts.[174]
G006	MuddyWater MuddyWater	<u>MuddyWater</u> has used PowerShell for execution.[175][176][177][178][179][180][181][182][183][184]
G012	Mustang Panda	Mustang Panda has used malicious PowerShell scripts to enable execution. [185][186]
<u>S045</u>	Netwalker	Netwalker has been written in PowerShell and executed directly in memory, avoiding detection. [187][188]
<u>S019</u>	NETWIRE	The <u>NETWIRE</u> binary has been executed via PowerShell script. <sup>[189]</sup>
<u>S038</u>	<u>njRAT</u>	njRAT has executed PowerShell commands via auto-run registry key persistence. [190]
G013	Nomadic Octopus	Nomadic Octopus has used PowerShell for execution.[191]
<u>G00</u> 4	19 OilRig	OilRig has used PowerShell scripts for execution, including use of a macro to run a PowerShell command to decode file contents. [43][192][193]
<u>C002</u>	22 Operation Dream Job	During <u>Operation Dream Job</u> , <u>Lazarus Group</u> used PowerShell commands to explore the environment of compromised victims. <sup>[194]</sup>
<u>C001</u>	4 Operation Wocao	During <u>Operation Wocao</u> , threat actors used PowerShell on compromised systems. <sup>[195]</sup>
<u>S035</u>	OSX_OCEANLOTUS.D	OSX_OCEANLOTUS.D uses PowerShell scripts.[196]
G004	1 <u>0</u> Patchwork	<u>Patchwork</u> used <u>PowerSploit</u> to download payloads, run a reverse shell, and execute malware on the victim's machine. [197][198]
<u>C003</u>	Pikabot Distribution February 2024	<u>Pikabot Distribution February 2024</u> passed execution from obfuscated JavaScript files to PowerShell scripts to download and install <u>Pikabot</u> . <sup>[199]</sup>

5	<u>31012</u>	<u>PowerLess</u>	PowerLess is written in and executed via PowerShell without using powershell.exe. [204]	
5	<u>80685</u>	<u>PowerPunch</u>	PowerPunch has the ability to execute through PowerShell.[120]	
5	<u>80441</u>	<u>PowerShower</u>	PowerShower is a backdoor written in PowerShell.[137]	
<u>S</u>	<u>80145</u>	POWERSOURCE	POWERSOURCE is a PowerShell backdoor. [205][206]	
<u>S</u>	<u>80194</u>	PowerSploit	PowerSploit modules are written in and executed via PowerShell. [207][208]	
5	<u>80393</u>	<u>PowerStallion</u>	<u>PowerStallion</u> uses PowerShell loops to iteratively check for available commands in its OneDrive C2 server. [209]	
5	80223	<u>POWERSTATS</u>	POWERSTATS uses PowerShell for obfuscation and execution. [210][179][211][183]	
5	80371	POWERTON	POWERTON is written in PowerShell. <sup>[212]</sup>	
5	<u>81046</u>	<u>PowGoop</u>	PowGoop has the ability to use PowerShell scripts to execute commands. <sup>[183]</sup>	
<u>S</u>	<u>80184</u>	POWRUNER	POWRUNER is written in PowerShell. [43]	
<u>S</u>	31058	<u>Prestige</u>	<u>Prestige</u> can use PowerShell for payload execution on targeted systems. [213]	
5	30613	<u>PS1</u>	PS1 can utilize a PowerShell loader. [214]	
<u>S</u>	<u>80196</u>	PUNCHBUGGY	PUNCHBUGGY has used PowerShell scripts. [215]	
<u>S</u>	<u>80192</u>	<u>Pupy</u>	<u>Pupy</u> has a module for loading and executing PowerShell scripts. [216]	
<u>S</u>	31032	<u>PyDCrypt</u>	PyDCrypt has attempted to execute with PowerShell.[217]	
5	80583	<u>Pysa</u>	Pysa has used Powershell scripts to deploy its ransomware. [218]	
<u>S</u>	<u>80650</u>	<u>QakBot</u>	QakBot can use PowerShell to download and execute payloads.[219]	
<u>S</u>	80269	QUADAGENT	QUADAGENT uses PowerShell scripts for execution. [220]	
5	<u>60241</u>	<u>RATANKBA</u>	There is a variant of <u>RATANKBA</u> that uses a PowerShell script instead of the traditional PE form. [221][222]	
<u>C</u>	<u>31039</u>	RedCurl	RedCurl has used PowerShell to execute commands and to download malware. [223][224][225]	
5	<u>80511</u>	<u>RegDuke</u>	RegDuke can extract and execute PowerShell scripts from C2 communications. [100]	
5	<u>80379</u>	Revenge RAT	Revenge RAT uses the PowerShell command Reflection. Assembly to load itself into memory to aid in execution. [226]	
<u>S</u>	<u>80496</u>	REvil	REvil has used PowerShell to delete volume shadow copies and download files. [227][228][229][230]	

23, 3:20 PWI			
IC	ID Name		Description
S	<u>80270</u>	<u>RogueRobin</u>	RogueRobin uses a command prompt to run a PowerShell script from Excel. [81] To assist in establishing persistence, RogueRobin creates %APPDATA%\OneDrive.bat and saves the following string to it:powershell.exe -WindowStyle Hidden -exec bypass -File "%APPDATA%\OneDrive.ps1". [231][81]
<u>C</u>	<u> </u>	Saint Bear	<u>Saint Bear</u> relies extensively on PowerShell execution from malicious attachments and related content to retrieve and execute follow-on payloads. [232]
<u>S</u>	<u>81018</u>	Saint Bot	Saint Bot has used PowerShell for execution. [232]
<u>C</u>	<u>30034</u>	Sandworm Team	Sandworm Team has used PowerShell scripts to run a credential harvesting tool in memory to evade defenses. [233][6]
<u>S</u>	S1085	Sardonic	Sardonic has the ability to execute PowerShell commands on a compromised machine. [234]
<u>S</u>	<u>80053</u>	<u>SeaDuke</u>	<u>SeaDuke</u> uses a module to execute Mimikatz with PowerShell to perform <u>Pass the Ticket</u> . [15]
<u>S</u>	<u>80382</u>	<u>ServHelper</u>	<u>ServHelper</u> has the ability to execute a PowerShell script to get information from the infected host. [235]
<u>S</u>	<u>80546</u>	<u>SharpStage</u>	SharpStage can execute arbitrary commands with PowerShell. [171][236]
<u>S</u>	<u>80450</u>	<u>SHARPSTATS</u>	SHARPSTATS has the ability to employ a custom PowerShell script. [211]
<u>C</u>	<u> 90121</u>	Sidewinder	Sidewinder has used PowerShell to drop and execute malware loaders. [237]
<u>C</u>	<u> 90091</u>	Silence	Silence has used PowerShell to download and execute payloads. [238][239]
<u>S</u>	80692	SILENTTRINITY	SILENTTRINITY can use PowerShell to execute commands. <sup>[240]</sup>
<u>S</u>	80649	SMOKEDHAM	SMOKEDHAM can execute Powershell commands sent from its C2 server. [241]
<u>S</u>	<u>S1086</u> <u>Snip3</u>		<u>Snip3</u> can use a PowerShell script for second-stage execution. [242][243]
<u>S</u>	S0273 Socksbot		Socksbot can write and execute PowerShell scripts.[198]
<u>C</u>	<u>00024</u>	SolarWinds Compromise	During the <u>SolarWinds Compromise</u> , <u>APT29</u> used PowerShell to create new tasks on remote machines, identify configuration settings, exfiltrate data, and execute other commands. [244][245] [246]
<u>S</u>	<u>S1140</u>	<u>Spica</u>	<u>Spica</u> can use an obfuscated PowerShell command to create a scheduled task for persistence. [247]
<u>S</u>	<u>80390</u>	<u>SQLRat</u>	<u>SQLRat</u> has used PowerShell to create a Meterpreter session. <sup>[248]</sup>
<u>S</u>	<u>81030</u>	<u>Squirrelwaffle</u>	<u>Squirrelwaffle</u> has used PowerShell to execute its payload. [249][250]
<u>C</u>	<u>30038</u>	Stealth Falcon	<u>Stealth Falcon</u> malware uses PowerShell commands to perform various functions, including gathering system information via WMI and executing commands from its C2 server. <sup>[251]</sup>
5	<u>80491</u>	<u>StrongPity</u>	<u>StrongPity</u> can use PowerShell to add files to the Windows Defender exclusions list. [252]
<u>C</u>	<u>G1018</u>	TA2541	TA2541 has used PowerShell to download files and to inject into various Windows processes. [253]
<u>C</u>	<u>G0062</u>	<u>TA459</u>	TA459 has used PowerShell for execution of a payload. [254]
C	<u>30092</u>	<u>TA505</u>	TA505 has used PowerShell to download and execute malware and reconnaissance scripts. [255][256][257][258]

ID Name		Description	
טו	14ame		
<u>G0139</u>	<u>TeamTNT</u>	TeamTNT has executed PowerShell commands in batch scripts. [259]	
G0027 Threat Group-3390		<u>Threat Group-3390</u> has used PowerShell for execution. [260][57]	
<u>G0076</u>	<u>Thrip</u>	<u>Thrip</u> leveraged PowerShell to run commands to download payloads, traverse the compromised networks, and carry out reconnaissance. [261]	
<u>G1022</u>	<u>ToddyCat</u>	<u>ToddyCat</u> has used Powershell scripts to perform post exploit collection. [262]	
<u>G0131</u>	<u>Tonto Team</u>	<u>Tonto Team</u> has used PowerShell to download additional payloads. <sup>[263]</sup>	
<u>S0266</u>	<u>TrickBot</u>	<u>TrickBot</u> has been known to use PowerShell to download new payloads, open documents, and upload data to command and control servers. [264]	
<u>C0030</u>	<u>Triton Safety Instrumented</u> <u>System Attack</u>	In the <u>Triton Safety Instrumented System Attack</u> , <u>TEMP.Veles</u> used a publicly available PowerShell-based tool, WMImplant. <sup>[265]</sup>	
<u>G0010</u>	<u>Turla</u>	<u>Turla</u> has used PowerShell to execute commands/scripts, in some cases via a custom executable or code from <u>Empire</u> 's PSInject. [266][209][267] <u>Turla</u> has also used PowerShell scripts to load and execute malware in memory.	
<u>S0386</u>	<u>Ursnif</u>	<u>Ursnif</u> droppers have used PowerShell in download cradles to download and execute the malware's full executable payload. [268]	
<u>S0476</u>	<u>Valak</u>	<u>Valak</u> has used PowerShell to download additional modules. <sup>[269]</sup>	
<u>G1017</u>	<u>Volt Typhoon</u>	<u>Volt Typhoon</u> has used PowerShell including for remote system discovery. <sup>[270][271][272]</sup>	
<u>S0670</u>	WarzoneRAT	WarzoneRAT can use PowerShell to download files and execute commands. [273][274]	
<u>S0514</u>	WellMess	WellMess can execute PowerShell scripts received from C2. [275][276]	
<u>S0689</u>	<u>WhisperGate</u>	<u>WhisperGate</u> can use PowerShell to support multiple actions including execution and defense evasion. [277][278][279]	
<u>G1035</u>	<u>Winter Vivern</u>	<u>Winter Vivern</u> passed execution from document macros to PowerShell scripts during initial access operations. [280] <u>Winter Vivern</u> used batch scripts that called PowerShell commands as part of initial access and installation operations. [281]	
<u>G0090</u>	WIRTE	WIRTE has used PowerShell for script execution. [282]	
<u>G0102</u>	<u>Wizard Spider</u>	<u>Wizard Spider</u> has used macros to execute PowerShell scripts to download malware on victim's machines. [283] It has also used PowerShell to execute commands and move laterally through a victim network. [284][285][286][287]	
<u>\$1065</u>	Woody RAT	<u>Woody RAT</u> can execute PowerShell commands and scripts with the use of .NET DLL, WoodyPowerSession . <sup>[288]</sup>	
<u>S0341</u>	<u>Xbash</u>	<u>Xbash</u> can use scripts to invoke PowerShell to download a malicious PE executable or PE DLL for execution. <sup>[289]</sup>	
<u>S1151</u>	<u>ZeroCleare</u>	ZeroCleare can use a malicious PowerShell script to bypass Windows controls. <sup>[290]</sup>	
<u>S0330</u>	Zeus Panda	Zeus Panda uses PowerShell to download and execute the payload. [291]	

### Mitigations

ID	Mitigation	Description
<u>M1049</u>	Antivirus/Antimalware	Anti-virus can be used to automatically quarantine suspicious files.
<u>M1045</u>	Code Signing	Set PowerShell execution policy to execute only signed scripts.
<u>M1042</u>	<u>Disable or Remove Feature</u> <u>or Program</u>	It may be possible to remove PowerShell from systems when not needed, but a review should be performed to assess the impact to an environment, since it could be in use for many legitimate purposes and administrative functions.  Disable/restrict the WinRM Service to help prevent uses of PowerShell for remote execution.
<u>M1038</u>	Execution Prevention	Use application control where appropriate. PowerShell Constrained Language mode can be used to restrict access to sensitive or otherwise dangerous language elements such as those used to execute arbitrary Windows APIs or files (e.g., Add-Type). [292]
<u>M1026</u>	Privileged Account  Management	When PowerShell is necessary, consider restricting PowerShell execution policy to administrators. Be aware that there are methods of bypassing the PowerShell execution policy, depending on environment configuration. [293]  PowerShell JEA (Just Enough Administration) may also be used to sandbox administration and limit what commands admins/users can execute through remote PowerShell sessions. [294]

#### Detection

ID	Data Source	Data Component	Detects
DS0017	Command	Command Execution	If proper execution policy is set, adversaries will likely be able to define their own execution policy if they obtain administrator or system access, either through the Registry or at the command line. This change in policy on a system may be a way to detect malicious use of PowerShell. If PowerShell is not used in an environment, then simply looking for PowerShell execution may detect malicious activity. It is also beneficial to turn on PowerShell logging to gain increased fidelity in what occurs during execution (which is applied to .NET invocations). [295] PowerShell 5.0 introduced enhanced logging capabilities, and some of those features have since been added to PowerShell 4.0. Earlier versions of PowerShell do not have many logging features. [296] An organization can gather PowerShell execution details in a data analytic platform to supplement it with other data.
			PowerShell can be used over WinRM to remotely run commands on a host. When a remote PowerShell session starts, svchost.exe executes wsmprovhost.exe  For this to work, certain registry keys must be set, and the WinRM service must be enabled.
			The PowerShell command Enter-PSSession -ComputerName \ <remotehost> creates a remote PowerShell session.</remotehost>
			Analytic 1 - Look for unusual PowerShell execution.
			<pre>sourcetype=WinEventLog:Microsoft-Windows-PowerShell/Operational   search EventCode=4104   eval suspicious_cmds=if(like(Message, "%-EncodedCommand%") OR like(Message, "%Invoke-Expression%") OR like(Message, "%IEX%") OR like(Message, "%DownloadFile%"), "Yes", "No")   where suspicious_cmds="Yes"</pre>
DS0011	<u>Module</u>	Module Load	Monitor for loading and/or execution of artifacts associated with PowerShell specific assemblies, such as System.Management.Automation.dll (especially to unusual process names/locations). [3][4]
			Analytic 1 - Processes loading PowerShell assemblies
			<pre>sourcetype=WinEventLog:Microsoft-Windows-Sysmon/Operational  search EventCode=7 ImageLoaded IN</pre>
			<pre>("C:\Windows\System32\System.Management.Automation.dll",  "C:\Windows\System32\powershell.exe")</pre>

ID	Data Source	Data Component	Detects
<u>DS0009</u>	Process	Process Creation	Monitor for newly executed processes that may abuse PowerShell commands and scripts for execution. PowerShell is a scripting environment included with Windows that is used by both attackers and administrators. Execution of PowerShell scripts in most Windows versions is opaque and not typically secured by antivirus which makes using PowerShell an easy way to circumvent security measures. This analytic detects execution of PowerShell scripts.  Powershell can be used to hide monitored command line execution such as:  net usesc start  Note: - The logic for Analytic 1 is based around detecting on non-interactive Powershell
			sessions (i.e., those not launched by a user through explorer.exe). This may lead to false positives when used in a production environment, so we recommend tuning any such analytics by including additional logic (e.g., looking for suspicious parent processes) that helps filter such events The logic for Analytic 2 is based around detecting on remote Powershell sessions. PowerShell can be used over WinRM to remotely run commands on a host. When a remote PowerShell session starts, sychost.exe executes wsmprovhost.exe.
			Analytic 1 - Non-interactive Powershell Sessions
			<pre>(source="WinEventLog:Microsoft-Windows-Sysmon/Operational" EventCode="1") OR   (source="WinEventLog:Security" EventCode="4688") Image="powershell.exe" AND   ParentImage!="explorer.exe"</pre>
			Analytic 2 - Remote Powershell Sessions
			<pre>(source="WinEventLog:Microsoft-Windows-Sysmon/Operational" EventCode="1") OR   (source="WinEventLog:Security" EventCode="4688") Image="wsmprovhost.exe" AND   ParentImage="svchost.exe"</pre>
			Analytic 3 - Powershell Execution
			<pre>(source="WinEventLog:Microsoft-Windows-Sysmon/Operational" EventCode="1") Image="C:\Windows\\powershell.exe" ParentImage!="C:\Windows\explorer.exe" stats values(CommandLine) as "Command Lines" values(ParentImage) as "Parent Images" by ComputerName</pre>
		Process Metadata	Consider monitoring for Windows event ID (EID) 400, which shows the version of PowerShell executing in the EngineVersion field (which may also be relevant to detecting a potential Downgrade Attack) as well as if PowerShell is running locally or remotely in the HostName field. Furthermore, EID 400 may indicate the start time and EID 403 indicates the end time of a PowerShell session. [297]
DS0012	Script	Script Execution	Monitor for any attempts to enable scripts running on a system that would be considered suspicious. If scripts are not commonly used on a system, but enabled, scripts running out of cycle from patching or other administrator functions are suspicious. Scripts should be captured from the file system when possible to determine their actions and intent.  Analytic 1 - Script Block Logging Events
			(source=WinEventLog: "Microsoft-Windows-PowerShell/Operational" EventID="4104"  AND Image="powershell.exe" AND (CommandLine="-enc" OR CommandLine="-ep bypass"  OR CommandLine="-noni*")
